

Department: Technology and Art: **Engineering**

| | | |
|---|---|--|
| <p>What is the intent statement for you subject? What does the discipline offer young people? What is the subject's purpose? This should be a short, snappy statement.</p> | | |
|  | <p>Technology prepares students for the modern world by focusing on innovating solutions to a problem. Students will be empowered to work with a wide range of materials, ingredients, modern technology and components in order for them to design and manufacture creative solutions to a wide range of problems and scenarios. These skills form a foundation of knowledge for their specialist Engineering pathway. In Key Stage 4 and 5 students will focus on obtaining the knowledge and skills required for an Engineering career</p> | |
| <p>What are the core aims of the curriculum? What key knowledge do you want students to have at the end of their learning journey?</p> | | |
| Year 7 | <p>Core Aims:</p> <ul style="list-style-type: none"> • Understand safe working practices within the Technology environment using substances, materials, food, tools and equipment. • Developing an understanding for healthy choices in nutrition. • Introducing basic electronic principles and key component function. • Develop presentation, drawing and communication skills through sketching, using drawing equipment and computer aided design. • Introducing an understanding of mechanical systems through linkages and cams. • Introducing practical skills in wood working using hand tools and machinery. • Introducing food hygiene and basic food handling skills. • Working with care and precision to accurately cut, measure and weigh materials | |
| | <p>Key knowledge:</p> <ul style="list-style-type: none"> • Nutrients: • Food Safety • Eat well guide. • 3D sketching skills – isometric, oblique and 2-point perspective drawing. • Health and safety • Mechanisms- linkages, Cams. • Tool names and functions. • Understanding the purpose of a specification | <p>Key skills:</p> <ul style="list-style-type: none"> • Knife skills. • Weighing, cutting, marking measuring accurately – use of templates. • Heat control in food – use of hob, oven and grill. • Soldering. • Computer Aided Drawing • 3D drawing. • Cutting, smoothing and drilling wood. |

| | | |
|--------|---|--|
| Year 8 | Core aims: | |
| | <ul style="list-style-type: none"> • Developing an understanding of material properties in wood, metal and plastic through modelling and experimenting. • Introducing programmable electronics. • Developing communication skills through 3D drawing and computer aided design. • Sustainability, environmental impact, life cycle of plastic and metal. • Sustainable energy. • Sustainability in Food- Food Miles, seasonality. • Develop nutritional knowledge by understanding special dietary needs. • Increase time management skills by creating more complex dishes. • Working as a team | |
| | Key knowledge: | Key skills: |
| | <ul style="list-style-type: none"> • Sustainable energy and finite resources – advantages and disadvantages. • Life cycle of plastics and aluminium- effect on the environment. • Developing an understanding of the properties of Thermoplastics and alloys. • Developing evaluative skills to make considered choices. • Understanding the effect of friction- use of bearings and pulleys. • Using electrical generator. • Designing for function • Developing their own technical specifications to meet the needs of a user. • Dietary needs, Seasonality and food miles. | <ul style="list-style-type: none"> • Cutting screw threads. • Forming: -Heat forming thermoplastics and bending alloys. • CAD using Autodesk Fusion. • Programming using the BBC Micro bit • Communication skills- working as a team; development of drawing skills; 3D modelling ideas; • Dough, batter and cake making consistency; • Kneading, proving and shaping. • Planning and time management. • Developing practical cooking skills. |

| | | |
|--------|--|---|
| Year 9 | Core aims: | |
| | <ul style="list-style-type: none"> • Develop practical skills to create complex dishes. • To understand and apply time plans to meet a brief and specification. • To be able to use wood working tools with care and accuracy: - measuring tools, templates. • Developing an understanding of material properties in timber, ferrous and non-ferrous materials. • Further develop CAD drawing skills to create 3D and 2D images which can be manufactured through laser cutting. • Develop an understanding of wood finishes. • Sustainability in Timber- FSC. • Scales of Production. • Metal processes- Heat Treatment, wasting using the lathe, • Creating a thread through tapping a hole. | |
| | Key knowledge: | Key skills: |
| | <ul style="list-style-type: none"> • Food Safety: - Apply it to making plans. • Food quality, temperature control; Contingency plans for change and adaptation. • Softwoods, Hardwood, manufactured boards – properties and sustainability-FSC • Wood finishes. • Processes: - lathe, heat treatment, metal properties. • Scales of manufacture. • Specifications- How to write accurately and create a brief. • Marking out and measuring accurately | <ul style="list-style-type: none"> • Using chisels safely and accurately. • Developing CAD skills in 2D design and Auto Desk. • Understanding how to use the lathe correctly to parallel turn, knurl, taper turn, facing and drilling. • Heat treatment- hardening and tempering. • Casting using moulds. • Cutting a screw thread with a die. • Spot welding. • Quality testing- seasoning and using temperature probes. • Quality control checking. • Independence when looking at contingencies. |

| | | |
|---|--|--------------------|
| Year 10 | Core aims: | |
| | <p><i>In Year 10 students will complete a 12-hour practical workshop-based exam from January to March. They will independently read a set of engineering drawings and then manufacture a single product in the workshops with a high degree of independence and tolerance. Students will produce their own risk assessment and production plan.</i></p> <ul style="list-style-type: none"> • Developing practical skills using metal sheet, bar, rod and sections to ensure that students use the specialist range of tools, equipment and machinery. • Ensuring students can produce and interpret engineering drawings. • Development of theory knowledge through practice exam questions. • Developing numeracy through calculations to assess dimensions: Pythagoras, Trigonometry, scaling, ratios • Understanding and producing risk assessment documentation. • Understand and apply the fundamental principles and concepts of Engineering Manufacture, including manufacturing processes, engineering materials, manufacturing requirements and developments in engineering manufacture • Develop learning and practical skills that can be applied to real-life contexts and work situations • Think creatively, innovatively, analytically, logically and critically • Develop independence and confidence in using skills that would be relevant to the engineering, manufacturing, process and control sector and more widely • Determine the sequence of operations required, recognising hazards and risks so that control measures can be implemented for safe working | |
| | Key knowledge: | Key skills: |
| <ul style="list-style-type: none"> • Marking out correctly: Understanding what equipment to use to mark out accurately: Callipers, engineers blue, scribes, engineers square; • Using data tables. • Cutting speeds of different metals. • Metal properties. Ferrous/ Non ferrous • Joining and fixing methods- Temporary, permanent and mechanical. • Scales of Manufacture: one off, batch, mass: Lean Manufacturing – 7 categories of waste • Advantages and limitations of jigs, fixtures, templates, moulds. Go no go gauges. • Levels of automation: Manual control, CAM processes, robotic control – fully automated. • Quality Control and Assurance systems – Impact. | <ul style="list-style-type: none"> • <i>Operating and setting up lathe, milling machine and pillar drills. Using gauges, stop settings and changing tools.</i> • <i>Using CAD software: 2D design and fusion design and drawing to communicate ideas and produce BS standard drawings.</i> • <i>Working safely in the workshops. Understanding and implementing control measures.</i> • <i>Marking out accurately.</i> • <i>Manufacturing to tolerance and quality standards.</i> • <i>Cutting outer and inner threads.</i> • <i>Heat treating workpieces in order to change their properties.</i> • <i>Sawing, shearing bending and filing sheet metal</i> | |

| | | |
|---------|---|--|
| | Core aims: | |
| | <p><i>In Year 11, students will complete a 12-hour workshop-based exam where they will manufacture a batch of products using CAD and CNC equipment. Students will plan to manufacture the product safely and independently. Students will be ready to sit a knowledge-based exam.</i></p> <ul style="list-style-type: none"> • Interpret engineering drawings to facilitate manufacture, using a range of tools and equipment, including Computer Numerical Control (CNC) machines. • Plan manufacturing production through practical experience of manufacturing in quantity. • Independently set up CNC machinery understand datums, offsets and changing of tools. • Understand how to simulate their CAD drawings and problem solve to achieve a batch of quality products. • Knowledge organisers and practice papers used to prepare for exam. | |
| Year 11 | Key knowledge: | Key skills: |
| | <ul style="list-style-type: none"> • Additive printing. • Understanding shaping processes: sand and die casting. Injection moulding; powder metallurgy; additive printing. • Mechanical properties of materials: definition of properties • Polymers: Thermoplastic and Thermosetting. – Types and properties • Smart Materials: SMA, Thermo-chromic ink, photochromic ink, QTC: - properties, typical forms, common applications • Composite materials: CRP, GRP: forms, properties and applications • Engineering ceramics: Silicon carbide, tungsten carbide, silicate glass. • Globalisation: ISO, employment opportunities. Social, ethical, economic and environmental considerations. | <ul style="list-style-type: none"> • Time Management skills: organise their time effectively. • Setting up and operating CNC equipment: Lathes, milling machines, laser cutters, 3D printers. Datum points, use of coordinates, tool offsets, tool change over, exporting and importing information • CAD drawing and simulating for production. 2D and 3D • Applying Health and safety control measures; • Working with quality systems to ensure products are right first time. • Production planning and sequencing of operations. • Exam skills development through practice papers and effective revision. • Use of manufacturers manuals, charts, to find pertinent information for manufacture. |

| | | |
|------------|--|--|
| Year 12 | Core aims: | |
| | <p><i>Preparation for Unit 3 '8' hour May exam in Year 12: Engineering Product Design and Manufacture.</i></p> <p><i>Preparation for Maths and Scientific Principles: January Year 13 exam</i></p> <p>Understanding the Triggers and engineering challenges that lead to changes in design.</p> <p>Designing out safety risks.</p> <p>Material properties and manufacturing processes: How they impact on design for an Engineered product.</p> <p>Developing technical specifications.</p> <p>Sketching and technical drawing skills to develop designing and communication.</p> <p>Exam techniques; practice questions and coaching.</p> <p>Development of Mathematical and scientific problem solving;</p> <p>Develop and apply the principles of Newton, Young, Faraday and Ohm</p> <p>Electrical and electronic problem solving using static and direct current, DC networks, magnetism and single-phase alternating current.</p> | |
| | Key knowledge: | Key skills: |
| | <ul style="list-style-type: none"> ● Design triggers- Market, demand, innovation, market research, sustainability, designing out risk. ● Design Challenges: reduction of energy, size, mass: power systems, energy recovery, sustainability, life cycle analysis. ● Equipment and systems constraints and opportunities: Interfaces- hydraulic, mechanical, electronic, software advantages and disadvantages ● Product Design Specifications. ● Materials properties: Mechanical, physical, thermal, electrical and magnetic ● Behaviour of advanced materials ● Surface treatments and coatings. ● Design for a customer; Ergonomics, carbon footprints; life cycle, commercial protection. ● Regulations: Codes of practice, Health and safety. ● Market, Performance, manufacturing analysis. ● Algebraic and trigonometric mathematical methods. ● Static Engineering systems. ● Dynamic Engineering systems | <ul style="list-style-type: none"> ● Communication skills in designing: 3D sketching, working drawing, sectional drawing and exploded views. ● Data analysis: Graphs and justifications. ● Analytical skills to evaluate their designs and improve them through annotated justified iterations. ● Applying the correct formulas and arranging formulas to solve problems ● Developing examination skills; Use exam questions to quantify knowledge and show learning ● Application of mathematical theory to a practical situation: - modelling electronics. |

| | | |
|------------|---|--|
| Year 13 | Core aims: | |
| | <i>Prepare students for their January Year 13 exam in Mathematic and Scientific Principles.</i> | |
| | <ul style="list-style-type: none"> • Working as a team: • Using engineering tools and machinery safely using control measures. • Planning for production and using quality systems. • Interpreting engineering drawings and working to tolerance. | |
| | <ul style="list-style-type: none"> • Developing CAD skills using Auto CAD and Autodesk Fusion to produce drawings to industry standard. • Using electronic programs to produce a schematic drawing. | |
| | Key knowledge: | Key skills: |
| | <ul style="list-style-type: none"> • Thermodynamic systems: • Hydrostatic systems: - pressure and thrust; Archimedes principles, flow through changes in diameter. • Understanding magnetism- Electromagnetic induction. • Single phase alternating current: Mapping how phases can be combined to increase power or voltage. • Developing an understanding for revision through practice and assessment: • Working to British standards in the creation of third angle orthographic drawing and components. • Developing a working knowledge and understanding for using CAD based commands in Autodesk Fusion, AutoCAD and circuit diagram programs. | <ul style="list-style-type: none"> • Applying the correct formulas and arranging formulas to solve mathematical problems. • Developing examination skills; Use exam questions to quantify knowledge and show learning • Application of mathematical theory to a practical situation: - modelling electronics. • Working in a group to support each other. • Project managing a team. • Manufacturing an engineered product to tolerance. • Reading and interpreting engineering drawings. • Developing an understanding for Auto CAD to draw an engineered product to standard using layers. • Developing an understanding of Autodesk Fusion 3D CAD to create: a sheet material product, a fabricated product and an assembled product from 10 components. • Understanding how to render in tone and texture, produce assembly views, exploded drawings, 3D drawing and orthographic drawings that meet British Standards and the specification |
